

A new approach to mask selection

Distinct categories for every patient preference

An easier way to help patients choose the right mask

Helping your patients choose the right mask at setup is one of the most important parts of CPAP therapy success. ResMed mask categories make it easy to understand key benefits, and can serve as a conversation starter between you and your patients. Every ResMed mask is designed to deliver effective therapy and a comfortable night's sleep, but each category offers something a little different.

Minimalist category

Small. Light. Simple.

Freedom category

Sleep in any position.

Ultra Soft category

Patented memory foam offers unique comfort.

Universal Fit category

Classic designs that fit nearly every face.

For many patients, their primary driver for mask choice is simple: less mask on their face. This category features masks that are small, lightweight and easy to use. Minimal facial coverage is also appealing to anyone who's claustrophobic.

This category features masks with a top-of-head connection, which keeps the system's tubing out of sight and out of the way. These masks help active sleepers comfortably move around at night and sleep in whichever position they choose, including on their stomach.

Mask discomfort is the number one reason CPAP users fall off therapy¹ and the Ultra Soft category is designed to change that. Featuring our patented memory foam cushions, AirTouch™ masks deliver unique levels of comfort and softness.

With a fit range of 97% for AirFit™ F20²⁻⁴ and 99% for AirFit™ N20,⁵ you can always reach for these masks with confidence. They're also designed to perform across a wide range of therapy pressures.
